

Blue Series

A Statement of
Style and Power

A Statement of Style and Power

The first impression of a tiger is its powerful roar, intended to strike fear deep in the heart. But observe the tiger a little longer, and you begin to notice gentler qualities and subtler nuances. You discover that the tiger is more than the roar.

Loud and Proud?

When you listen to music and watch movies, something similar happens. At first, we may be bowled over by the roar of a loud and proud home entertainment system. In technical terms, the "roar" is wide dynamic range and high maximum sound pressure level. Both are key elements in recreating the live-ness of recorded music and the impact of movie surround sound. But in the long run, we demand more than the roar for a fully satisfying listening and viewing experience.

Loud and Clear!

Fortunately, like the tiger, the DALI Blue Series has much more to offer. Not just loud and proud, but also loud and clear. As one independent audio journal recently described it:

"DALI loudspeakers take your mind off technology and let you focus on the musical experience".

DALI Blue Series loudspeakers are assembled by hand at our own advanced facility, using the finest components and the most sophisticated and reliable manufacturing techniques

1001

This ultra-compact powerhouse demonstrates

that big sound doesn't necessarily mean a big box. The 1001 is also a fine alternative to the sonic compromise of in-wall loudspeakers.

Able to disappear in your listening room, the 1001 features the Blue Series' characteristic rounded edges, curved grille frame and the faintest hint of blue on the front panel.

The 1001 incorporates all the advanced DALI components and assembly technologies that make the Blue Series clear winners.

2002

High power handling and freedom from the damaging effects of power compression are ensured in the Blue Series thanks to a special low-viscosity magnetic fluid that provides effective protection for the high frequency driver.

With a larger bass driver and increased cabinet volume, the 2002 offers extended bass response, greater bass control and extraordinary dynamic capabilities, while retaining the refinement and subtlety that define the Blue Series.

3003

All floor-standing Blue Series loudspeakers incorporate audiophile features such

as dual input terminals for bi-wiring or bi-amping and height-adjustable, revers-

ible spikes that can be fitted with either the pointed end or the round end in contact with the floor. Multiple bass/midrange drivers

substantially increase power handling, dynamic range and maximum output.

The rich furniture finish and powerful true-to-life sound of the 3003 will be attractive additions to any room.

By placing an identical pair of 6.5" bass/midrange drivers above and below the high frequency driver to form a symmetrical vertical array, the 5005 delivers near-ideal sound distribution to cover a wider listening area, while reducing the unwanted effects of floor and ceiling reflections.

With dual bass drivers with completely independent motor systems and two cones, the 5005 offers improved low frequency speed, precision and authority to equal the clarity and realism of its mid and high frequencies.

5005

All Blue Series 1" coated silk dome tweeters employ an intelligently designed magnet motor system, featuring the "Focused Magnetic Forcefield".

A slightly larger, more powerful magnetic system in the floorstanding Blue Series models, results in silky-smooth, effortless high frequencies for relaxed listening for hours at a time.

6006

With three 6.5" bass/midrange units, the 6006 is a prime choice for home cinema and all musical styles, even in large rooms.

silky-smooth, effortless high frequencies

Surroun

With harmonious proportions and a stylishly crafted exterior that allow it to blend in with most modern interiors, the flagship of the DALI Blue Series takes home cinema and music to an entirely new level.

The three-way driver configuration consists of a 1" soft dome tweeter, 5" midrange and two 8" bass units. Dedicated drivers for the high, mid and low sections of the audio spectrum ensure natural, perfectly integrated high frequencies, transparent, richly detailed midrange and stunning deep bass.

8008

d sound

The magnetically shielded C 1000 center channel loudspeaker is acoustically optimised for placement directly above or below a TV screen. Its purity of sound ensures extreme clarity for dialogue, music and effects.

The R 1000 surround loudspeaker strikes the perfect balance between realistic surround presence and "invisible" installation. The high frequency driver mounted in the bottom of the cabinet can be aimed directly at the listening position for ideal audience coverage. The bass/mid drivers are also angled toward the audience. A passive bass radiator offers valuable low frequency enhancement.

Center + Rear

The C 1000 and R 1000 are carefully designed to match the performance of DALI Blue Series loudspeakers in order to create a thrilling, convincing surround illusion.

Denmark

Based in Denmark with strong traditions in engineering and furniture design, DALI rapidly grew to become an internationally acclaimed loudspeaker maker, praised enthusiastically by proud owners and by independent audio journals around the world. The millions of fine loudspeakers sold by DALI to satisfied customers in over 40 countries are the result of rare levels of enthusiasm, skill, advanced technology and pure inspiration.

Each DALI loudspeaker is carefully assembled, tested and packed by a conscientious team who are personally accountable for the final result. Well into our second decade, DALI embodies a unique blend of cutting edge technologies and fine Scandinavian craftsmanship.
